### LETTER OF RECOMMENDATION

-

It gives me great pleasure in recommending **Alekya Santoshi Gayitri Maddu** for her graduate program at your coveted university. As a **Project Manager**, I observed her commitment in performing and completing her work on time as an Automation Test Engineer.

Alekya being new to accessibility testing has shown a great interest in learning and developing her knowledge on a new skill without any hesitation. Even though she is from a selenium java background she has readily taken up the challenge of learning C# for automation and has delivered all the automation scripts to the client on time. Alekya and their team have received client appreciation for the framework designed as a part of building the automation testing scripts.

Alekya being the youngest of the testing team is always exceptional in managing automation testing and having reviews and discussions with client team members when needed. Apart from being technically sound, she has shown a penchant for grasping and envisioning practical problems and followed a pragmatic approach to overcome them with great ease. She is always compliant in performing her tasks and never made a spill out from testing the applications. She maintained a good rapport with the development team to get the bugs resolved and retested on time.

I completely support her decision to pursue her master's degree concerning her field of interest. As a project manager, I want to reiterate my recommendation and believe that she is a well-deserving candidate for the graduate program at your esteemed university with requisite financial aid and assistantships.

Please feel free to contact me if you need any further information regarding Alekya.

Regards,

**Abhilasha Mishra**
